

Response to Media Coverage

21 February 2017 (Sydney): NetComm Wireless Limited (ASX: NTC).

Today an article was published in The Australian newspaper stating “It is understood that the company (nbn) is set to sign a contract with US networking solutions vendor Adtran to implement G.fast technology on the FTTP footprint.”

NetComm Wireless wishes to advise that it is the only company that has a signed contract with the nbn for the supply of Distribution Point Units (DPU’s) for nbn’s current rollout of Fibre To The Curb (FTTC).

NTC is working with nbn in respect of possible future upgrades to G.Fast technology and is capable of providing a FTTC solution using this technology, if the nbn decides to deploy a G.Fast DPU solution. In the normal course of events NTC expects to participate in any future tender for G.Fast technologies.
