

NETCOMM WIRELESS LAUNCHES NEW R&D FACILITY IN THE US

10 August 2016 (Sydney): NetComm Wireless Limited (ASX: NTC) a leading global developer of data communications technologies, today announced that it has established its first research and development (R&D) facility outside of Australia with the launch of its new R&D centre in Sunrise, Florida, United States.

The establishment of this new R&D centre is a natural extension of NetComm Wireless' commitment to the US market, particularly in light of the Company's announcement of a major contract win within the US in respect of its fixed wireless business.

The facility currently employs two teams of approximately 30 experienced software, hardware and radio frequency (RF) engineers. The selection of the Sunrise area in Florida became an obvious choice. It is a significant technology hub attracting a substantial number of multinational technology based companies and has a large pool of talented telecommunications engineers.

"NetComm Wireless has experienced tremendous growth in recent years and we will continue to invest in the R&D resources needed to accelerate the expansion of our business in the US and globally. Our new R&D centre will allow us to meet the specific needs of our US based customers and partners, while strengthening our product design, development and testing capabilities," said David Stewart, CEO and Managing Director, NetComm Wireless.

The Company has also announced the expansion of its R&D facilities in Sydney and Melbourne.
