

HITACHI SELECTS NETCOMM WIRELESS TO DELIVER ICT COMPONENT OF SMART ENERGY PROJECT

4 May 2015 (Sydney): Global electronics giant, **Hitachi, Ltd** selected **NetComm Wireless Limited (ASX: NTC)** to enable Hitachi's remote energy monitoring and management systems for international customers. Designed to interoperate with mobile networks globally, NetComm Wireless' communications technology will allow Hitachi to deliver smart solutions that facilitate the efficient use of energy resources worldwide.

Hitachi selected NetComm Wireless to support its development of ICT infrastructure for the Smart Community Demonstration Project in Greater Manchester, UK. Hitachi is responsible for the design of the ICT system needed to add smart capabilities to installed heat pumps, and selected NetComm Wireless to custom design wireless communication technology that ensures the reliable and secure collection, management and analysis of energy data in real time.

"Hitachi is a world leading innovator with a longstanding commitment to address some of society's most demanding challenges and we look forward to working together to redefine the way that energy is managed. It is an honour to be selected by Hitachi to deliver smart energy solutions that address the key objectives of Hitachi and its customers," said David Stewart, CEO and Managing Director, NetComm Wireless.

"Japan is an important market for us. Our collaboration with Hitachi and Kanematsu Communications demonstrates our capabilities in engineering smart city technologies that can be scaled to support large rollouts globally. Our partnership approach is to work with leading innovators to help countries achieve their emissions reduction targets and transform the future of energy," said David.
