

NetComm Wireless Signs Agreement with Nokia

13 July 2016 (Sydney): NetComm Wireless Limited (ASX: NTC) today announces that it has signed a Frame Purchase Agreement with Nokia for the supply of the Company's fixed wireless devices to Nokia in relation to their global FastMile initiative. FastMile provides operators with an end-to-end, LTE-based means of delivering broadband internet services to suburban and rural areas, ensuring high data rates and guaranteed minimum throughput of coverage. Under the agreement, NetComm Wireless will provide Nokia with Wireless Network Terminating Devices engineered to deliver LTE broadband in rural and regional areas worldwide in specific frequencies.

The arrangement will increase global market access to fixed wireless broadband devices developed by NetComm Wireless and will provide Nokia with the basis to build an ecosystem of partners for FastMile. NetComm Wireless' devices extend the trusted zone for operators and enable universal broadband initiatives with a focus on the "last mile".

Fixed wireless overcomes economic and geographic barriers to high speed connectivity, offering a high-performance fixed line broadband alternative for underserved households and businesses in regional and rural areas.

The agreement represents a further milestone in the execution of NetComm Wireless' global fixed wireless growth strategy, where external research shows the total addressable market to be US\$80 billion.
