

Agreement with Bell Canada for supply of fixed wireless technology

17 April 2018 (Sydney, Australia): NetComm Wireless Limited (ASX: NTC) is pleased to announce that it has signed a Product Purchase Agreement with Bell Canada for the supply of Intelligent Fixed Wireless Access technology devices.

Bell is Canada's largest communications company and will be delivering high-speed broadband services to select rural communities, starting in Ontario and Quebec, using NetComm Wireless' fixed wireless technology.

As is the normal practice with Product Purchase Agreements in the telecommunications industry, no specific unit volumes are contained in the Agreement. However, NetComm Wireless is of the view that this Product Purchase Agreement will generate significant revenues in the coming financial years. NetComm Wireless anticipates that initial deliveries of the Intelligent Fixed Wireless Access devices should occur in Financial Year 2019, subsequent to attaining normal customer acceptance and required Canadian regulatory approvals.

Commenting on the agreement with Bell Canada, NetComm Wireless CEO & Managing Director Ken Sheridan said: "This contract win with Bell Canada follows a successful 4 month in-field trial and builds on our previous fixed wireless contract wins with Ericsson / **nbn** in Australia and AT&T in the USA. It is another key milestone in the growth of our international footprint servicing tier 1 telecommunications carriers in developed markets."

A practical and economical alternative to fibre, cable and copper networks, Fixed Wireless delivers broadband speeds to regional, remote and outer urban areas over 4G LTE networks worldwide. Network operators and carriers can quickly extend robust network grade broadband connectivity to hard-to-reach areas around the world and deliver ultra-fast speeds and triple play services with guaranteed service level agreements.
